

For new release

For each big release we need to update lastAppReviewDate in FirebaseRemoteConfig.js.

Firebase Emulators

NOTE: You have to rebuild to make changes to the firebase instant!

Best way to run your app locally is to run firebase emulator:

You have to be in /functions folder for the environment variables to be correct

```
firebase emulators:start
```

Check localhost:4000 to inspect your data.

If it should close unexpectedly, you can close your port by:
